Section 7. Terms of Reference

Terms of Reference for

Preparation of Comprehensive/ Integrated Urban Development Plan

OF GHORAH SUB-METROPOLITAN CITY OF GHORAH, DANG DISTRICT

1. Introduction

Nepal's urbanization process is rapid and imbalance compared to regional context. This trend is concentrated mainly in Kathmandu Valley and other cities of Terai or fertile Valleys. The result is that the large cities are failing to cope with the demand of infrastructure services and job opportunities and are increasingly reeling under the externalities of the haphazard urbanization. Environmental degradation, congestion, urban poverty, squatter settlements, unemployment and lagging provisions of infrastructure services have become increasingly visible phenomenon in these large cities. Hence, much of the economic gains acquired from urbanization have been eroded from its negative externalities. Despite non-agricultural sector being a major contributor to gross domestic product (GDP), urban centers in the country have yet to emerge as the engines of economic growth and contribute to reduction of urban or rural poverty alike.

Despite all these problems, government's responses have been grossly inadequate. The responses tend to be scattered and ad-hoc rather than planned and coordinated. A weak institutional capability has been one of the leading factors in poor performance of the government agencies. Above all, lack of the long-term development perspectives or plans has led to uncoordinated actions of agencies involved in urban development. Therefore, the result is poor or limited impact in urban development efforts. Consequently, economic development has not taken place in the desired manner consistent with the pace of population growth.

Whatsoever, Nepal has experienced some settlement planning attempts since 1944; the first city Rajbiraj was planned to resettle people from Hanuman Nagar. In 1956; first National Periodic Plan (Economic Development Plan) was originated. At present, 13th Plan is in implementation. During 1960s, many people from hill and mountain (especially displaced from natural disaster, national parks etc.) were resettled in Terai plains. In 1969, Preparation of Physical Development Plan of Kathmandu Valley was a turning point in urban planning sector of Nepal. After this, so many development plans of Kathmandu Valley were prepared but never implemented due lack of institutional/ legal mechanism and financial resources. In 70s, Regional Development concept was initiated in Nepal; master plan of four regional headquarters (Dhankuta, Pokhara, Surkhet and Dipayal) was prepared and implemented in some extent. In the late 80s, structure plan of all designated urban centres was prepared. Similarly, IAP was popular in 1990s before the self-governance act enacted by government of Nepal. In 2000 long-term concept of Kathmandu valley (vision 2020) was prepared. Currently, Periodic planning of urban centres (municipalities) is in practice. Despite these attempts were made, it provided neither approved land use plan nor concrete physical plan implementation mechanism regarding the major urban centers in the country. Municipal plans prepared in the past employing integrated action planning technique or structure planning is found to focus mainly on physical aspects. Besides, IAP's overwhelming concentration on ward level problems has also led to neglect of municipal level vision and desires. As a result, though several municipalities show some

Ram Dhan Shrestha
Engineer

improvement in physical aspects, progress is still found lagging in several critical urban areas such as education and health. Issues such as social exclusion or deprivation, urban poverty, environmental conservation, economic development, financial mobilization and municipal capacity building have remained largely unattended in the previous planning efforts.

Keeping in view of this context, the Government of Nepal has already enacted and has been implementing National Urban Policy since 2007. The policy is conspicuous by prioritizing investment to the lagging regions of the country, while fostering development of regional cities and intermediate towns as well. Therefore, with an objective of reducing poverty and upgrading urban physical facilities, MoFALD has prioritized to invest in the recently formed Municipalities in Country.

In the above context, the Office of Ghorahi Sub-Metropolitan City intends to call for submission of technical and financial proposal by the shortlisted national consulting firms to prepare Comprehensive Town Development Plan of Ghorahi Sub-Metropolitan City.

2. Study area

Ghorahi sub-metropolitan is the main town of the Rapti region and the headquarters of the Dang district. It is located at an elevation of 2,300 ft (701 m) in the Mahabharat-Chure hill region. The hills of Dang Valley are part of the Mahabharat and Chure Range.

It is the seventh largest city and largest sub-metropolitan of Nepal. The city (formerly **Tribhuvannagar**) lies in Province no 5 in Mid-Western part of Nepal. It is the largest city of Dang Deukhuri District of southwest Nepal. Located in the Inner Terai region, it lies 413 kilometres (257 mi) south-west of Nepal's capital Kathmandu and is one of the "Counter Magnets" being developed as an alternative centre of growth to help ease the migration and population explosion in the Kathmandu metropolitan area. It is the largest city of Rapti Region and is surrounded by the Sivalik in the south and Mahabharat range of Hills in the north.

Ghorahi Sub-metropolitan is in the Dang Valley on the foothills of the Himalayas nestled between the river Babai on the east, south and on the west which ends being the famous Sarayu and Ganges in India. The city is famous for its picturesque landscape and slightly milder climate and provides a gateway to the surrounding region of Rolpa, Pyuthan, Salyan and Rukum.

The climate of the area is sub-tropical. The average maximum temperature during summer fluctuates between 29° C & 33° C and minimum temperature in winter season ranges range from 10° C to 18° C. The relative humidity is in the range of 84% to 87 %. The average annual rainfall is estimated at approximately 1500mm per year.

These should be formulated mainly using Logical Framework Approach (LFA) and should be supplemented by performance indicators and means of verification of such indicator as far as practicable. When adequate data are not found and formulating indicators becomes not feasible and if the advisory committee and the technical working committee in the Held are also satisfied of such deficiency of data, the team leader on the advice of such committees may introduce necessary modifications in the LFA technique. Sectors, which are required to be included, should include at least physical, environmental management, social, economic development, disaster management. Climate Change, financial mobilization, and organization development. Such Sectoral plans and programs may be formulated by forming Sub-Steering Committees.
